

Gambar 1 create table customers

Gambar 2 create table orders

phpMyAdmin interface showing a SQL query execution result. The query is:

```
1 SELECT a.id,a.first_name,a.last_name,a.email,a.address,a.city,a.state,a.zip_code,b.customer_id,b.order_place_date FROM customers a, orders b WHERE a.id = b.customer_id AND b.order_place_date BETWEEN '01/01/2019' AND '31/12/2019' GROUP BY a.email ORDER BY COUNT(customer_id);
```

The result shows: MySQL returned an empty result set (i.e. zero rows). (Query took 0.0193 seconds.)

Below the message, the column headers for the result set are displayed:

id	first_name	last_name	email	address	city	state	zip_code	customer_id	order_place_date
----	------------	-----------	-------	---------	------	-------	----------	-------------	------------------
